Trans. of Bumazhnaya Promyshlennost' (USSR) 1958,
v. 33, no. 5, p. 10-13.

Discussions are presented on the effect of water hard-
ness (total, and carbonate), of the cations and the
anions of the salts giving rise to the hardness, and
also of the cations Na^+ , NH_4^+ , Al^{3+} on the beating of
cellulose and on the texture and the properties of
paper. The dependence of the cellulose grinding pro-
cess on the pH of the medium was also studied, since
changes in the concentration of dissolved electrolytes
induced changes in the hydrogen ion exponent.
